

Issue #1: Should there be one required level of detail for expenditure allotment data or should agencies continue to have options?

- Our policy position is to continue with the status quo and give agencies the two options they currently have, unless:
 - We find that building the ability to accommodate both of the current options takes substantially more time than building one option, AND
 - This would mean that we would not be able to deliver more critical functionality to agencies, AND
 - We can deliver allotment development tools that address the workload concerns raised by current option 1 agencies in moving to a required option 2 level of data.
